

Various periodontal treatments using a microscope and an Er:YAG laser

In recent years, there has been an increase in reports of minimally invasive techniques in the field of periodontal treatment.

In the field of periodontal regeneration therapy, examples include the Entire Papillar Preservation Technique and Nipsa.

Vista is also well-known in the field of CTG.

A microscope and an Er:YAG laser are effective in a minimally invasive, limited surgical field.

Here, we would like to report several cases in which they were used.
